Mr. Phillip Gainer, FDOT District 3 Secretary
FDOT District 3
Highway 90 East
Chipley, FL 32428-0607

RE: Pace Boulevard (SR 292), Barrancas Avenue to Massachusetts Avenue (FPID 439735-1-52-01)

Dear Secretary Gainer:

Our staff is working together with your team for the resurfacing improvements along Pace Boulevard from Barrancas Avenue to Massachusetts Avenue. Pace Boulevard (SR 292) is an arterial splitting a transportation disadvantaged neighborhood in the heart of Escambia County. This neighborhood has a median household income of \$33,670 annually, 20% of households do not own a vehicle, and 44% of residents are younger than 18 or over 65 who need options other than a vehicle. The residents utilize walking or transit for daily trips and Pace Boulevard (SR 292) has become one of our highest injury crash corridors with over 1253 crashes including 679 injuries, and 13 fatalities in just the last 5 years. Speed is the main reason for the high level of injury and death on this corridor.

Pace Boulevard (SR 292) is classified with a FDOT Context Classification of C4- Urban General. With the opportunity of resurfacing, we have an obligation to increase safety along this corridor to decrease crashes. Therefore, Escambia County Board of County Commissioners requests to reduce the posted/design speed of Pace Boulevard (SR 292) from 40 MPH to 35 MPH (Florida Design Manual (FDM) Table 201.5.1). To encourage that speed, the lane widths should be narrowed to 10-feet, 11-feet for bus/outside lane to support the lower posted speed (FDM Table 210.2.1). With these modifications, we can implement bike lanes on this corridor just by restriping Pace Boulevard (SR 292). This additional bike lane in both directions will increase the buffer for pedestrians and transit users along the sidewalk to improve safety for pedestrians.

Attached are the proposed redlined typical section, crash reports, and FDM referenced tables which will allow FDOT to support this request. Thank you for the opportunity to partner on this project to protect our most vulnerable users, our pedestrians, and to bring an equitable environment for transportation options to Pace Boulevard (SR 292) by reducing speeding vehicles, implementing bike facilities, and increasing buffers for pedestrians and transit users.

I look very forward to your favorable response to this request. Please contact Christine Fanchi, PE, Transportation Engineer at (850) 595-3433 with any questions concerning this request.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert Bender". The signature is fluid and cursive, with the first name "Robert" and last name "Bender" clearly distinguishable.

Robert Bender, Chairman

Escambia County Board of County Commissioners

Table 201.5.1 Design Speed

Limited Access Facilities (Interstates, Freeways, and Expressways)		
Area	Allowable Range (mph)	SIS Minimum (mph)
Rural and Urban	70	70
Urbanized	50-70	60
Arterials and Collectors		
Context Classification	Allowable Range (mph)	SIS Minimum (mph)
C1 Natural	55-70	65
C2 Rural	55-70	65
C2T Rural Town	25-45	40
C3 Suburban	35-55	50
C4 Urban General	30-45	45
C5 Urban Center	25-35	35
C6 Urban Core	25-30	30
Notes: (1) SIS Minimum Design Speed may be reduced to 35 mph for C2T Context Classification when appropriate design elements are included to support the 35 mph speed, such as on-street parking. (2) SIS Minimum Design Speed may be reduced to 45 mph for curbed roadways within C3 Context Classification. (3) For SIS facilities on the State Highway System, a selected design speed less than the SIS Minimum Design Speed requires a Design Variation as outlined in <i>SIS Procedure (Topic No. 525-030-260)</i> . (4) For SIS facilities not on the State Highway System, a selected design speed less than the SIS Minimum Design Speed may be approved by the District Design Engineer following a review by the District Planning (Intermodal Systems Development) Manager.		

Table 210.2.1 – Minimum Travel and Auxiliary Lane Widths

Context Classification	Travel (feet)			Auxiliary (feet)			Two-Way Left Turn (feet)	
	Design Speed (mph)			Design Speed (mph)			Design Speed (mph)	
	25-35	40-45	≥ 50	25-35	40-45	≥ 50	25-35	40
C1 Natural	11	11	12	11	11	12	N/A

C3 Suburban	10	11	12	10	11	12	11	12
C4 Urban General	10	11	12	10	11	12	11	12
C5 Urban Center	10	11	12	10	11	12	11	12
C6 Urban Core	10	11	12	10	11	12	11	12

Notes:

Travel Lanes:

- (1) Minimum 11-foot travel lanes on designated freight corridors, SIS facilities, or when truck volume exceeds 10% on very low speed roadways (design speed ≤ 35 mph) (regardless of context).
- (2) Minimum 12-foot travel lanes on all undivided 2-lane, 2-way roadways (for all context classifications and design speeds). However, 11-foot lanes may be used on 2-lane, 2-way curbed roadways that have adjacent buffered bicycle lanes.
- (3) 10-foot travel lanes are typically provided on very low speed roadways (design speed ≤ 35 mph), but should consider wider lanes when transit is present or truck volume exceeds 10%.
- (4) Travel lanes should not exceed 14 feet in width.

Auxiliary Lanes:

- (1) Auxiliary lanes are typically the same width as the adjacent travel lane.
- (2) Table values for right turn lanes may be reduced by 1 foot when a bicycle keyhole is present.
- (3) Median turn lanes should not exceed 15 feet in width.
- (4) For high speed curbed roadways, 11-foot minimum lane widths for dual left turn lanes are allowed.
- (5) For RRR Projects, 9-foot right turn lanes on very low speed roadways (design speed ≤ 35 mph) are allowed.

Two-way Left Turn Lanes:

- (1) Two-way left turn lanes are typically one foot wider than the adjacent travel lanes.
- (2) For RRR Projects, the values in the table may be reduced by 1-foot.
