Figure 1 is a cross-sectional diagram of a road with a 10% slope. A truck is shown on the road. The diagram includes labels for 'FLITE ROAD' and 'FLITE ROAD' on either side of the road. Dimensions are indicated: a 6' width for the truck, a 6' width for the shoulder, and a 10' width for the total road. The road is labeled 'FLITE ROAD' and 'FLITE ROAD'.

The diagrams show three types of silt fences:

- TYPE A SILT FENCE:** A simple trench with a filter fabric installed at the bottom.
- TYPE B SILT FENCE:** A trench with a filter fabric and a layer of soil or mulch on top.
- TYPE C SILT FENCE:** A trench with a filter fabric and a layer of soil or mulch, with a silt flow arrow indicating the direction of water flow.

DO NOT ELIMINATE THE BARRIER THAT FILTERED WATER ACTS AS A DAM ACROSS ENVIRONMENTAL WATERCOURSES. FILTERS ARE TO BE USED AT UP-AND LOCATIONS AND TURBIDITY BARRIERS USED AT DOWN-THROCKS OF WATER.

Figure 1 consists of two schematic diagrams, (a) and (b), illustrating the experimental apparatus. Diagram (a) is a top view showing a rectangular container filled with a material labeled 'FILTER (GAC)'. A layer on top of the filter is labeled 'ET ON FILTER'. A 'HOSE CLAMP' is shown securing a 'ROD EXTENSION' to the side of the container. A 'PUMP DISCHARGE HOSE' is connected to the bottom of the container, and an 'INLET HOSE' is connected to the top. Diagram (b) is a cross-sectional view showing the 'HOSE CLAMP' holding the 'ROD EXTENSION' against the side of the container. The 'PUMP DISCHARGE HOSE' is shown exiting from the bottom, and the 'INLET HOSE' is shown entering from the top.
