SUMMARY:

The scope of this project is to provide stormwater treatment for a currently untreated drainage sub-basin within the Bayou Texar Bay Watershed. This treatment will be provided by installing a proprietary underground treatment unit with associated stormwater structures and piping. Also, limited localized street flooding will also be addressed in the project area by modifying existing drainage structures and installing new ones, where applicable. This project is consistent with current technology and industry standards for stormwater retrofit

treatment and is part of the City's ongoing program to improve the water quality of area waterways.
