### SUMMARY:

The purpose of this project is to provide proprietary stormwater treatment for an untreated 195-acre drainage sub-basin within the Pensacola Bay Watershed. This treatment will be provided by retro-fitting the 108" diameter underground stormwater conveyance system at the south end of Alcaniz

Street with a proprietary underground treatment unit to remove trash, sediment, and certain suspended solids (pollutants) prior to discharge into Pensacola Bay. This project is consistent with current technology for stormwater retrofit treatment and is part of an ongoing program utilized throughout the City to improve water quality of area waterways.
